Access control

Access control for retail stores is more than just locking doors. It's about giving you peace of mind that your store is secure long before and after an incident occurs.

By securing high-value items and restricting staff-only areas, you can proactively reduce theft and ensure a safer shopping experience. Our access control solutions give you total visibility of your store, allowing you to control entry points and monitor high-risk zones with ease. From investigating discrepancies to managing emergencies, our systems provide the real-time data you need for fast, informed responses.

Key area of interest	Challenge	Solution	Benefit
Restricted areas (staff & customers)	Controlling who enters sensitive areas like managerial offices & back rooms	Use QR codes, fobs, or mobile credentials for easy access	Reduces theft risk with a clear digital audit trail
High-value cabinets	Preventing luxury or high-value items from theft	RFID readers or mobile keys combined with visual cameras	Eliminates lost keys , limits theft, & tracks every time a case is opened
Pharmacy & controlled substances	Ensuring strict compliance with legal requirements for storing medication	Fingerprint or facial recognition alongside RFID badges (HIPAA compliance)	Ensures total compliance & prevents high-risk theft
Loading docks	Managing outside drivers & vendors without giving full store access	Issue temporary, time-bound PINs or QR codes	Prevents unauthorized entry & lowers staffing costs

Solutions for smarter intercom and access control

Updating an old system? Expanding to new locations? Whatever your access control and security goals, we have the solution. We offer complete access control solutions, including easy-to-use management software and secure user credentials.

Common use cases

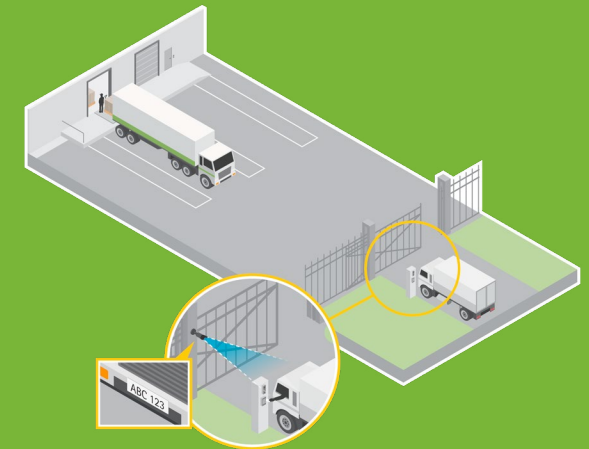

High-value assets

Controlled deliveries

Loading docks
